

## Security Engineer

**Function type:** Freelance - Vast      **Location:** Brussels  
**Duration:** Long term      **Reference:** 202008387

### Description:

The Security Engineer will be part of a team that supports network security and SD-WAN solutions, but will have to focus on network security solutions. This opportunity would allow you to work in a team where your talents will be challenged, but where you can also gain knowledge and improve your skills.

### Responsibilities:

Validate security designs & solutions and discuss with presales & success manager;  
Discuss security solutions with external customers and propose improvements if required (solution validation);  
Implement security solutions, like discussed with the external customer, and perform required testing;  
Plan migrations, create migration documentation (scenario/actions/responsibilities) and execute migrations;  
Execute change requests and handle incident tickets (with RCA documentation, if required).

### Requirements:

#### Technical Skills/Experience

- Excellent **network security** knowledge and experience, specifically with vendors Palo Alto and/or Fortinet (Palo Alto is a must have);
- Have excellent **troubleshooting** skills (primarily security but also networking);
- Experience in network virtualization (Vmware);
- Be able to create proper documentation (solution design, migration scenario's & RCA);
- Knowledge on Fortinet SD-WAN, or SD-WAN in general, **is a plus**;

#### Language Requirements:

- Your Dutch is **very fluent**
- You have a good knowledge of English
- Knowledge of French is an advantage
  
- You are excellent team worker;
- Communicative & assertive with an objective nature;
- Committed to quality and have organizational skills;
- Methodical and able to treat several problems autonomously;
- Customer minded and sense of responsibility and self-initiative;
- You are stressproof with the sense or urgency in a business context;
