

System Engineer

Function type: Vast **Location:** Mechelen
Duration: Longterm **Reference:** 201907814

Description:

CONTEXT

Our client has activities in Belgium, France, UK, US, Germany, The Netherlands, Austria, Spain, Italy, Cech Republic and Poland.

Each entity has its own ICT organisation, but all ICT departments work together on specific technological domains. This collaboration is managed by the Group ICT Director and a small staff on group level.

The Infrastructure and Collaboration application service work closely together with the Infrastructure and Collaboration application services on Group level. The technology strategy, selection of tools, the definition of standards, the governance model, ... is decided by the Group ICT Manager Shared Services Centre Infrastructure and Collaboration. Every technological domain is managed by a small international team of ICT staff of different entities and division.

The Division Manager Service Desk and Infrastructure is managing local infrastructure and gives support to the local end-users. For well-defined technologies the Division Manager Service Desk and Infrastructure will give support in second line on Group level.

Within the Infrastructure management team different technologies are managed by specialised system engineers, e.g. network specialists, telecommunication specialists, Office 365 specialists, ... For each technological domain, our client seeks to have a small teams of specific specialists, most likely spread over different entities, that manages the given technology. They form a virtual team managing a technology on Group level. The report locally to the Manager Infrastructure and Collaboration or the local ICT manager and they report functionally to the Group Manager Infrastructure and Collaboration applications.

RESPONSIBILITIES

- ? Manage the infrastructure on a daily basis
- ? Ensure customer service is timely and accurate
- ? Contribute to improving customer support by actively responding to queries and handling complaints
- ? Establish best practices through the entire technical support process
- ? Follow up with customers to identify areas of improvement
- ? Provide customer feedback to the appropriate internal teams, like product developers
- ? Collaborate on Group level for the definition of standards for well-defined basic ICT technology domains (network, telephony, workstations, end-point security, software distribution, ...) in close collaboration with internal and external specialist
- ? Ensure all basic ICT technology is respecting SLA's defined (or non-defined)
- ? Assure incidents are solved and problems are identified and investigated
- ? Install and manage a monitoring system for all business-critical ICT components in order to reduce time between incident occurrence and start of the incident solving process

Requirements:

REQUIREMENTS

- ? Proven work experience as System Engineer
- ? Hands on experience with help desk and remote control software
