

SQL Support Engineer

Function type: Freelance - Vast **Location:** Brussel
Duration: Longterm **Reference:** 202007852

Description:

Profile:

Senior MS SQL Support Engineer service

Role description:

The IT Infrastructure department is looking for an experienced Microsoft SQL/application support engineer. This person will be part of the Microsoft Application team, which is responsible to deploy all in-house developed applications running in Acceptance & Production, and which manages some core shared applications to support those applications (like Microsoft SQL Server, MongoDB, RabbitMQ, ...). This specific profile focuses on MS SQL Server (must-have), but the engineer will also have the other mentioned responsibilities.

Service description

- Deploy and update all applications in acceptance & production environments (mostly Windows IIS & SQL based);
- System administration of the MS SQL server environment (system DBA tasks like database creation, deletion, backup, restore, optimization, security, deployment of scripts, ...);
- System administration of the supporting core applications: MongoDB, RabbitMQ, NEO4J, Redis Cache, and all other shared technologies – knowledge of these products is a nice to have;
- Assistance to development where required (e.g. performance tuning);
- Enforcement and monitoring of security guidelines and standards;
- Monitoring, change and patch management of the environment;
- Advisory role for product lifecycle and additional development of the landscape;
- Disaster recovery check and implementation;
- Ensure optimal 2nd/3rd level (interface to Microsoft and other 3rd parties) support;
- Keep operating and installation documentation for the above areas up to date;
- Be part of the duty role (24/7, 1 in 4-5 weeks) in this team.

Requirements:

Technical service requirements

- Computer science degree, a comparable education or proven experience in the sector (>5 years);
- Proven experience of MS SQL management for at least 5 years (please provide description & references);
- In-depth knowledge of MS SQL 2014/2016 is a must;
- In-depth knowledge of and operational experience with MS Windows Server 2012R2 –2016;

- Knowledge of PowerShell is a must;
- Knowledge of IIS, MongoDB, RabbitMQ, NEO4J or Redis Cache is a plus;
- Must be natively Dutch or French speaking, able to speak and understand English – German is a plus.

Other important, non-technical skills

- Must be a team player;
- Must have planning and organizational skills (working with strict deadlines – must be able to cope with stress);
- Must be able to troubleshoot technical problems;
- Must be able to work independently;
- Must be customer minded;
- Must be able and eager to learn new products or technologies;
- Must be accountable;
- Must have an operational mindset;
- Must be available for duty role (24/7, 1 week in 4), definitely NOT a 9 to 5 worker.

Extra information

- Workplace will be Brussels (Schaarbeek), with occasional travel to Berlin (all travel expenses paid by client);
- Must have a driver license and car (required for the duty role) and mobile phone;
- Start date : Asap;
- Please state in your proposal proven experience with references if available.
