

Cyber Security Consultant

Function type: Freelance - Vast **Location:** Brussels
Duration: Longterm **Reference:** 202008156

Description:

Role description

As a Security Solution Architect, you will be in charge of drawing up the appropriate cyber and physical security measures for application, infrastructure and data landscape, based on the security/system requirements and policies to protect the assets. You will work on roadmap and projects related to a suite of solutions including new technologies and leadership solutions.

You will also participate to the enhancement of the security team processes/way of working.

You will work in collaboration of Enterprise Security Architects, CSIRT and different security teams (network, security governance and management) and Cyber/Physical engineers.

Our client is looking for 2 security architects, each with another domain of expertise:

1. experience in Identity & Access, and another
2. with experience/expertise in Public Key Infrastructure and Security Monitoring.

The candidate has at least 5 years of experience and expertise in one of the domains, and this is clearly visible in experiences.

A general knowledge of IT architecture is also a must for both profiles.

Required Responsibilities

- Analysing the potential path forwards for projects affecting the security eco-system
- Translating new security initiatives into project end-to-end architecture and roadmap taking into account the target architecture and non-functional requirements.
- Designing and documenting solutions, taking into account functional and non-functional requirements such as availability, performance, scalability and security
- Following up the project execution by expert teams
- Identifying information risks with regard to confidentiality, integrity, availability and quality. You will also propose and elaborate mitigating measures.
- Supporting other Solution Architects (application, infrastructure, data) for the security aspects within their disciplines
- Documenting architectural decisions and writing a business case
- Participating to the 3-year security roadmap definition
- Keep track of the evolution of the security solutions market

Requirements:

Degree & Experience

- You have an IT or security Master's degree or equivalent by experience.

- At least 5 years' experience in one of the following security domains: Identity & Access Management and Governance, Privileged Access Management, Public Key Infrastructure, Security Monitoring
- 5 years' experience in IT architecture/design

Technical skills

- You are good at identifying security flaws/risks in IT solutions and know how to deal with these
- You design solutions, taking into account the customer's needs and the risks for the organization
- Knowledge of any of the following technologies is an added value: Active Directory, LDAP, ForgeRock, Sailpoint, Saviynt, One Identity, Omada, Usercube, NetGuard, Microsoft CA, Splunk, ArcSight

Attitudes/Behaviour

- You have strong communication skills and are able to convince others by your involvement, assertiveness and accessibility
- You dare to take decisions in complex situations
- You are a problem solver, focused on simplicity and efficiency
- You are keen to contribute to the development of a new discipline

Languages

- You speak English fluently; knowledge of French or Dutch is a plus
