IT Architect

Function type:	Freelance - Vast	**Location:**	Kapelle-op-den-Bos
Duration:	Long term	**Reference:**	202108582

Description:

As an IT Architect, you are at the heart of an on-going IT transformation journey to become and remain a world class partner for the people, customers, partners and society.
You will have to interact with many colleagues in business and IT around the globe to help us shape our current and future IT landscape.

Main responsibilities:

- You take on the responsibility on projects to design the optimal IT architecture solutions that support the business.
- You take on the responsibility to design integrations between various enterprise systems, cloud solutions and partners and lead the collaboration between solution and technology architects.
- You define and maintain enterprise application Integration standards & patterns and promote their application in the entire organization.
- You define and implement a set of processes, SOA governance, that ensures that all system integration points are formally managed throughout the enterprise.
- You define and implement an enterprise application integration roadmap and architectural blueprint.
- Be the integration expert across solutions and interfaces, assist in troubleshooting, provide expertise and guidance.
- You are keeping up with new trends and technologies and actively propose them in the correct context.

Requirements:

- You have a higher education degree.
- Experience in working with **middleware technologies and API management**, ideally based on SAP and/or Microsoft.
- You have a good understanding of **data models and dataflows**.
- Knowledge of Salesforce and/or Web technologies is **an asset**.

- You have a creative and analytical mind and strong reasoning skills. You are willing to learn continuously and pick up information quickly.
- You can explain and communicate complex matters in a clear and understandable way to an audience of technical or non-technical people.
- You are a very good listener and are capable of influencing people, and above all you can build long lasting relationships.
- You can effectively drive people, process and technology changes in a dynamic and complex operating environment.
- You are pro-active and you have a positive mindset.
- Experience in managing people will be a plus.

- You have a good knowledge of **English**, written as well as spoken.
